Application No. 02229935, Filed 19900831, Published 19920414 Inventor(s): ;USUI HIDEO FUJI PHOTO FILM CO LTD THERMAL TRANSFER DYE DONATING MATERIAL JP04112085

## Abstract:

type compound so as to increase the same toward a color part becoming later in a transfer order. binder and a silicone type compound and controlling the coating amount per a unit area of the silicone PURPOSE: To improve the fusion at the time of thermal transfer by constituting a dye layer of a dye, a

is naed. unmodified or modified silicone oil or a solid silicone polymer soluble in an org. solvent such as toluene immediately before, a good results can be obtained. As the silicone type compound to be used, 1.1-3 times (wt. basis) that of the silicone type compound of the dye donating layer transferred donating layer. When the addition amount of the silicone type compound is increased so as to become compound is set to the relation of cyan dye donating layer > magenta dye donating layer > yellow dye is carried out in the order of yellow - magenta - cyan, the addition amount of the silicone type increased toward a color part becoming later in a transfer order. For example, in such a case that transfer silicone type compound and the coating amount per a unit area of the silicone type compound is donating layers to one surface of a support and the dye donating layer contains a dye, a binder and a CONSTITUTION: A thermal transfer dye donating material is formed by providing a plurality of dye
